The Doctor's Tank and Fuel Quality Management Service Program

Changes in fuel quality, stability and contamination occur naturally.

Relevant's Five Step Program cleans up tank and fuel contamination problems before they have a chance to start in aboveground (AST), underground (UST), subbase, & day tanks.

Step 1 - Identification

The Doctor would make an examination to identify the problems.

Step 2- Classification

The Doctor would analyze the symptoms and classify the illness.

Step 3 – Prescription

The Doctor writes a Prescription of Care to gain control of the illness causing the discomfort.

Step 4 – Control

The Doctor has gained control of your illness.

Step 5 – Prevention

The Doctor puts you on a maintenance schedule.
